Digital Business and Electronic Commerce Bernd W. Wirtz 2021-03-28 This textbook introduces readers to digital business from a management standpoint. It provides an overview of the foundations of digital business with basics, activities and success factors, and an analytical view on user behavior. Dedicated chapters on mobile and social media present fundamental aspects, discuss applications and address key success factors. The Internet of Things (IoT) is subsequently introduced in the context of big data, cloud computing and connecting technologies, with a focus on industry 4.0, smart business services, smart homes and digital consumer applications, as well as artificial intelligence. The book then turns to digital business models in the B2C (business-to-consumer) and B2B (business-to-business) sectors. Building on the business model concepts, the book addresses digital business strategy, discussing the strategic digital business environment and digital business value activity systems (dVASs), as well as strategy development in the context of digital business. Special chapters explore the implications of strategy for digital marketing and digital procurement. Lastly, the book discusses the fundamentals of digital business technologies and security, and provides an outline of digital business implementation. A comprehensive case study on Google/Alphabet, explaining Google's organizational history, its integrated business model and its market environment, rounds out the book.

Rural Development Through Carbon Finance Sebastian M. Scholz 2009 In a timely contribution to the international discussion of the post-Kyoto climate regime this study hypothesizes that Clean Development Mechanism (CDM) projects in the land use and forestry sector are an efficient instrument for climate change mitigation that contributes to rural development and poverty alleviation at the same time. To this end, the study analyzes socio-economic aspects of a forestry project established under the CDM rules considering an East African case study exemplarily. An agricultural household survey in Tanzania delivered the empirical data for the structural equation model at the center of the analysis. Looking at different farm assets it is shown that the benefits of land use-related climate projects go way beyond pure mitigation. They also have a positive impact on a very broad asset base on which poor farm households depend. Hence, the current CDM only allowing for afforestation and reforestation projects is far too restricted to deliver on its twin objective.

Mobile Payments, Consumer Policy and the Law Nwanneka V. Ezechukwu 2023-03-17 Mobile technology offers an innovative and cost-effective channel for delivering a range of financial services, including mobile payments. In some jurisdictions, mobile payments simply provide a convenient option for facilitating payment transactions. In other jurisdictions, mobile payments are viewed as potentially transformative because they present an opportunity to expand access to financial services. However, as with other innovations, mobile payments raise consumer protection concerns and require robust regulatory mechanisms to address such concerns. Against this backdrop, the book adopts a typology of consumer policy tools which can be used to address the identified consumer concerns. This typology guides the enquiry into the existing consumer protection frameworks applying to mobile payments in selected jurisdictions (Canada, Kenya, and the United Kingdom). The main objective of this endeavour is to identify best practices that national authorities seeking to leverage mobile payments and similar innovations can emulate. This book will be of interest to policymakers, regulators, industry stakeholders, students, and scholars interested in the regulation of innovative financial services, particularly from a consumer protection perspective.

Software Systems Safety O. Grumberg 2014-05-30 Until quite recently, the correctness and security of software systems was a largely theoretical problem relevant only for a small group of computer specialists. Today it is a fundamental problem for society at large, with security breaches in banking software, malware attacks and bugs in programs affecting millions of people and making the headlines almost daily. The computer science community is developing verification and synthesis tools which will mechanize ever more tasks in the design of secure programs. This book presents the papers delivered at the NATO Advanced Study Institute (ASI) Summer School Marktoberdorf 2013 - Software Systems Safety. The participants represented research groups from both industry and academia, and the subjects covered included: software model checking via systematic testing, program synthesis, E voting systems, probabilistic model checking in biology, infinite state model checking, Boolean satisfiability, interactive proof, and software security by information flow control. The Marktoberdorf Summer School is one of the most renowned international computer science summer schools, and this book, with its detailed overview of current research results with special emphasis on the solving of software systems security problems, will be of interest to all those whose work involves systems security.

Data Privacy Management, Cryptocurrencies and Blockchain Technology Joaquin Garcia-Alfaro 2020-12-28

This book constitutes the revised selected post conference proceedings of the 15th International Workshop on Data Privacy Management, DPM 2020, and the 4th International Workshop on Cryptocurrencies and Blockchain Technology, CBT 2020, held in conjunction with the 25th European Symposium on Research in Computer Security, ESORICS 2020, held in Guildford, UK in September 2020. For the CBT Workshop 8 full and 4 short papers were accepted out of 24 submissions. The selected papers are organized in the following topical headings: Transactions, Mining, Second Layer and Inter-bank Payments. The DPM Workshop received 38 submissions from which 12 full and 5 short papers were selected for presentation. The papers focus on Second Layer, Signature Schemes, Formal Methods, Privacy, SNARKs and Anonymity.

Mobile Services Industries, Technologies, and Applications in the Global Economy Lee, In 2012-08-31 As business paradigms shift from desktop-centric environments to data-centric mobile environments, mobile services create numerous new business opportunities. At the same time, these advances may also challenge many of the basic premises of existing business models. Mobile Services Industries, Technologies, and Applications in the Global Economy fosters a scientific understanding of mobile services, provides a timely publication of current research efforts, and forecasts future trends in the mobile services industry and its important role in the world economy. Written for academics, researchers, government policymakers, and corporate managers, this comprehensive volume will outline the great potential for new business models and applications in mobile commerce.

Sensorimotor-Focused EMDR Arthur G. O'Malley 2018-12-14 Sensorimotor-Focused EMDR combines two hugely influential and effective therapies, EMDR therapy and sensorimotor psychotherapy, to provide a new approach. In doing so, the book supports the widely held view of psychotherapists that in trauma the primary store of neurological information is somatic rather than cognitive. Many therapists trained in EMDR find that additional resources are needed for patients who present with symptoms of complex trauma and dissociation. This is because EMDR is primarily a top-down approach based on CBT, with the addition of bilateral stimulation (BLS) in visual, tactile and auditory modalities. By contrast, Sensorimotor-Focused EMDR takes a body-based and bottom-up approach that seeks to resolve trauma by reprocessing information at multiple levels - in the gut-brain, the heart-brain and the head-brain, as well as in the endocrine, immune and nervous systems. Fully revised since *The Art of BART* (2015), the book looks at the latest advances in neuroscience, including research into the effectiveness of psychotherapy and the mysteries of consciousness and the development of mind. It also looks at the role of newly discovered organs, the mesentery and the interstitium, and provides clear anatomical evidence for the communication of biophotons in energy channels known as the primo vascular system. SF-EMDR is the only therapy that

fully integrates Western theories of affective neuroscience with Eastern observations on activation of chakras, pranas and energies, and in doing so it offers strong potential for enhanced outcomes and optimized performance for patients.

Transition to Diagnosis-Related Group (DRG) Payments for Health Caryn Bredenkamp 2019-12-19 This book examines how nine different health systems--U.S. Medicare, Australia, Thailand, Kyrgyz Republic, Germany, Estonia, Croatia, China (Beijing) and the Russian Federation--have transitioned to using case-based payments, and especially diagnosis-related groups (DRGs), as part of their provider payment mix for hospital care. It sheds light on why particular technical design choices were made, what enabling investments were pertinent, and what broader political and institutional issues needed to be considered. The strategies used to phase in DRG payment receive special attention. These nine systems have been selected because they represent a variety of different approaches and experiences in DRG transition. They include the innovators who pioneered DRG payment systems (namely the United States and Australia), mature systems (such as Thailand, Germany, and Estonia), and countries where DRG payments were only introduced within the past decade (such as the Russian Federation and China). Each system is examined in detail as a separate case study, with a synthesis distilling the cross-cutting lessons learned. This book should be helpful to those working on health systems that are considering introducing, or are in the early stages of introducing, DRG-based payments into their provider payment mix. It will enhance the reader's understanding of how other countries (or systems) have made that transition, give a sense of the decisions that lie ahead, and offer options that can be considered. It will also be useful to those working in health systems that already include DRG payments in the payment mix but have not yet achieved the anticipated results.

Appcelerator Titanium Smartphone App Development Cookbook Jason Kneen 2015-11-30 Over 100 recipes to help you develop cross-platform, native applications in JavaScript About This Book Leverage your JavaScript skills to write mobile applications using Titanium Studio tools with the native advantage Deploy your application on the App Store and Google Play Add your own IOS native modules in Objective-C, in an easy-to-follow step-by-step format Who This Book Is For This book is an essential for any developer learning or using JavaScript who wants to write native UI applications for iOS and Android. No knowledge of Objective-C, Swift and Java is required and you'll quickly be developing native, cross-platform apps, in JavaScript! What You Will Learn Transfer data between applications with URL schemes, and make your application accessible to other mobile applications and services Connect with remote services using JSON Work with Google Maps and Apple Maps, GPS and annotate routes Create animations and special effects Integrate notifications and connect with social media services such as Facebook and Twitter Build applications with Alloy MVC - a rapid application development framework Design native APIs and use local databases In Detail The mobile web has paved the way but many users want to have "native" applications installed. Using Appcelerator as a platform it's now possible to write iOS, Android, and Windows phone applications in JavaScript! It allows developers to develop fully native UI applications using Appcelerator studio tools without any knowledge of Objective-C, Swift or Java. This book will take you through the process of building cross-platform, native UI applications for the mobile from scratch. You will learn how to develop apps, how to use GPS, cameras and photos and how to build socially connected apps. You will also learn how to package them for submission to the App Store and Google Play. This cookbook takes a pragmatic approach to creating applications in JavaScript from putting together basic UIs, to handling events and implementation of third party services such as Twitter, Facebook and Push notifications. The book shows you how to integrate datasources and server APIs, and how to use local databases. The topics covered will guide you to use Appcelerator Studio tools for all the mobile features such as Geolocation, Accelerometer, animation and more. You'll also learn about Alloy, the Appcelerator MVC framework for rapid app development, and how to transfer data between applications using URLSchemes, enabling other

developers to access and launch specific parts of your app. Finally, you will learn how to register developer accounts and publish your very own applications on the App Store and Google Play. Style and approach
This book offers a set of practical recipes with a step-by-step approach for building native applications for both the iOS and Android using JavaScript. This hands-on guide shows you exactly how to use the Appcelerator platform to rapidly develop cross-platform, native apps.

Cost and Fee Allocation in Civil Procedure Mathias Reimann 2011-11-15 The volume describes and analyzes how the costs of litigation in civil procedure are distributed in key countries around the world. It compares the various approaches, draws general conclusions from that comparison, and presents global trends as well as common problems and solutions. In particular, the book deals with three principal questions: First, who pays for civil litigation costs, i.e., to what extent do losers have to make winners whole? Second, how much money is at stake, i.e., how expensive is civil litigation in the respective jurisdictions? And third, whose money is ultimately spent, i.e., how are civil litigation costs distributed through mechanisms like legal aid, litigation insurance, collective actions, and success oriented fees? Inter alia, the study reveals a general trend towards deregulation of lawyer fees as well as a substantial correlation between the burden of litigation costs and membership of a jurisdiction in the civil and common law families. This study is the result of the XVIIIth World Congress of Comparative Law held under the auspices of the International

Academy of Comparative Law.

This book is useful for undergrad and graduate students, professionals, and anyone looking to gain a solid foundation to continue their learning of dynamic e-commerce environment.

Cold Blooded Ken McGann 2011-11-30 The free world is threatened as never before following the escape of a notorious international assassin. Josef Sanchez, now a committed terrorist, gathers old extremist allies and plans death and destruction beyond imagination. Legendary British SIS agent Daniel Crane undertakes the dangerous and perhaps impossible task of tracking and destroying his perennial Venezuelan enemy before countless British citizens suffer the horrors of viral devastation. Sanchez threatens to attack Western targets with not only conventional attacks but secretly planned mass devastation. A deadly and monstrous airborne disease, now a reality, is within his grasp. Crane gathers his resources and begins an international hunt for the Executioner, facing death at every turn as desperation drives him on. British Intelligence sources know only one possible target but the date is close and the means of attack unknown. Britain is taunted by Sanchez amid promises of looming catastrophic attacks. Sanchez must be stoppeddestroyed, but only Crane, his eternal enemy, knows his foe; how he thinks. He must find himand destroy his movement. If not, the world is at the mercy of a madman. An extremist of the worst kind dedicated to the slaughter of untold millions.

Entrepreneurship and Local Economic Development Bruno Dallago 2018-09-05 This book focuses on the nature and role of entrepreneurship in modern developed and emerging economies and societies, its relation to governments and universities, and its role in the often-forgotten informal economy. The aim is to position entrepreneurship in the post-crisis context and explore how its relation to universities and governments contributes to explain the countries' and territories' growth performance and resilience or vulnerability to the crisis. The accent is particularly on processes and patterns at local level and in small and medium-sized enterprises in local economic systems and districts, local systems of innovation, and the types and configurations of innovation these give origin to. With globalization, entrepreneurship has become fundamental for the competitiveness of territories and countries, for policy management and for development. The local dimension is fundamental because of agglomeration economies and effects, the advantages of proximity and the nature of knowledge and information. Furthermore, territories carry to the centre-stage tacit knowledge, localized social capital, embeddedness and interpersonal relations as fundamental components of their endogenous socio-economic development and competitiveness. When local systems are connected in a horizontal network, they contribute to the strength of national and international systems. To play a constructive role from this perspective, entrepreneurship must avoid local entrenchment and support the local economy to upgrade and be competitive. To do this, the entrepreneurs' interaction and alliance with universities and governments is a must for those countries and localities wanting to emerge. This requires that enterprises, universities and governments create synergies and spill-overs to their mutual advantage.
